

Farmville, NC (2002)

The North Carolina tower site is an 1168', 10' face tower that was built in wetlands. It supports a large digital television broadcast antenna as well as various other dishes and antennas. The wetlands posed unique problems to solve with gaining site access to build the tower while complying with Army Corps of Engineers regulations. The tower was built next to an existing guyed tower on site, which added to the complications since the guy wires had to be interlaced. The tower has a single car elevator and a staircase to reach the elevator entrance platform. The tower also has a 10' wrap around communications platform. It was designed, fabricated, and erected in 2002.
