

## Miami, FL (Summer 2003)

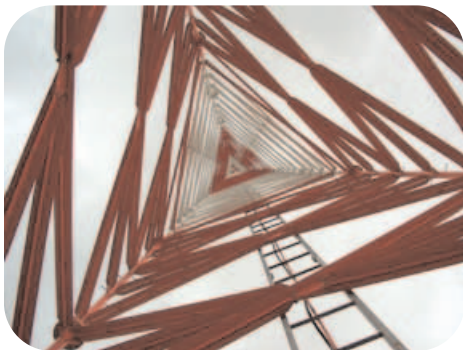

This turn-key project involved obtaining all necessary permits for demolition and construction as well as the removal of an existing AM guyed tower, and the construction of a new 309' self-supporting AM tower. The tower site was located in the parking lot of an adjoining business which required that the work be performed as quickly as possible and with minimal interruption to the business's activities. The existing tower that was removed was a guyed tower. One of the guy anchor points was located in the bay, which posed additional challenges to removing the tower.
