

# Tower Reinforcement and Rescue

ERI is the industry's leader in tower reinforcement. ERI is consistently selected by consultants, customers, and erectors to handle the modification of structures. We bring towers up to current codes, reinforce structures for additional loading, and help in getting future capacities available for increased revenues.

ERI considers the difficulties in reinforcement installation. Our engineers work closely with installers often reporting to work 2000 feet in the air. ERI is staffed with innovative, cost-efficient, professionals.

ERI's engineering team has been involved with the EIA/TIA committees since the RS 222 C code. We have aided in the new G standard.

No one wants to experience a tower rescue. Towers fail for a variety of reasons:

- A lack of maintenance
- Catastrophic weather
- Installer negligence

ERI's engineers are experienced in all facets of the broadcast industry. Trust the most experienced professional team in the world for your emergency.
